

SERIALIZATION

This section has once again been expanded to help you identify the year of manufacture on many popular manufacturers and trademarks. To use these tables, compare your serial number(s) to the correct manufacturer and model, and ascertain which bracket it falls into based on the year of manufacture and corresponding serial number. In several cases, caliber rarity can also be determined. Date codes are now also provided on some manufacturers and countries to allow you to determine the year of manufacture by the date code on the barrel or frame/receiver.

The publisher wishes to thank Galazan's and Dixie Gun Works for providing a portion of this serialization information.

AGUIRRE Y ARANZABAL (AYA) SERIALIZATION 1945 to 1994

From 1945 to 1994 AYA had manufactured over 600,000 shotguns of all models and grades with all serial numbers assigned in chronological order. For 1927-1944 year of manufacture date codes, see "Spanish Year Of MFG. Date Codes" in this section.

<u>YEARS</u>	<u>SER. # START</u>	<u>SER. # END</u>
1945-1948	0001	19999
1949-1954	20000	71999
1955-1959	72000	115286
1960-1965	115287	222508
1966-1971	222509	378548
1972-1977	378549	481401
1978-1983	481402	576551
1984-1987	576553	599999
1988-1993	600000	602422
1994	602423	602642

Beginning 1995 the Spanish proof house implemented a new serial number system. The new system consists of four sets of digits separated by a hyphen. The first set is the manufacturers code, the second designates the type of firearm, the third set is the firearms chronological number, the fourth set shows the year of mfg.

1975	"X75" suffix after Ser. No.

BROWNING SERIALIZATION 1975 TO CURRENT

In 1975 Browning began using the two (2) letter code system (located in the middle of the serial number) for determining the year of manufacture. For example "PN" would be "89" indicating 1989.

<u>LETTER</u>	<u>NUMBER</u>
Z	1
Y	2
X	3
W	4
V	5
T	6
R	7
P	8
N	9
M	10

BROWNING MODEL CONFIGURATION CODES

Beginning in 1976 Browning started identifying models and its configuration using a three number (or possibly a combination of letters and numbers) code in the serial number.

COLT SINGLE-ACTION MODEL NUMBERS

The author wishes to express thanks to Mr. Don Wilkerson for allowing the edited information published below from his 1986 Post-War Single-Action Revolver, 1976-1986 publication.

A working knowledge of model numbers for the various Colt single-action revolvers is a must for even a novice collector. Since the mid - 1970s Colt has placed the model number on the end label of the shipping cartons of virtually all their firearms. Many collectors and publications regularly use the model number to describe or differentiate between revolvers. Using the model number is an accurate and efficient method to delineate a particular variation. Example: .45 caliber revolver with a 4 3/4 in. barrel, blue and casehardened finish and eagle stocks can be described as a simple "P.1840."

Each Colt model is specified by an alphabetical letter and 4 numerical digits. The basic model number as it pertains to single-action revolvers can be broken down as follows:

MODEL P - basic type of frame. The letter "P" is used to delineate the single-action type of frame.

FIRST NUMERAL - "1" is the first model built on a particular type of frame. Numerals 2, 3, 4, etc. indicate later versions. These versions are not always numbered in numerical order and the same number has been used for different models at different times. A "1" denotes the basic standard single-action frame. A "2" denotes the new black powder frame available through the Colt Custom Gun Shop. A "3" has been used at various times to denote a non-standard frame or cylinder. The "4" is used to specify the New Frontier style of frame. Numbers such as "7" and "8" are frequently used to specify commemorative or special editions.

SECOND NUMERAL - specifies caliber. A "4" denotes .32-20, a "6" denotes .357 Magnum, a "7" denotes .44 Special, an "8" denotes .45 caliber, and a "9" specifies .44-40 caliber.*

THIRD NUMERAL - denotes barrel length. "3" is used to denote both a 3 inch and a 4 inch barrel. "4" is 4 3/4 inch or 5 inch, "5" is 5 1/2 inch, "7" is 7 1/2 inch, and "1" is 12 inch.*

FOURTH NUMERAL - is used to denote several different variations of the standard model. Some of the most common examples are: "1," "2," or "6" for nickel finish, "1" for full blue finish in the case of P-1871, and "2," "3," and "4" as used for the Sheriff's Model series to denote blue and casehardened finish, nickel finish, and Royal Blue and casehardened finish, respectively. The fourth numeral can also denote the type of stocks as in P-1673. The fourth numeral in the basic model designation must be used in conjunction with the preceding three numerals to determine its exact meaning. The fourth numeral is kind of a "catch-all" number. Many times this number serves only to differentiate a later model from a similar model assembled years earlier.

*The .32-20 caliber and the 5 inch barrel length are listed in the 1984 Colt Buyer's Guide, but as of this date neither have been produced.

STANDARD MODEL P REVOLVER CODES

The primary model numbers used by Colt for Model P revolvers produced since 1976 are as follows:

P-1640 - .357 Magnum, 4 3/4 in. barrel, blue finish, eagle stocks.
 P-1641 - .357 Magnum, 4 3/4 in. barrel, nickel finish, wood stocks.
 P-1650 - .357 Magnum, 5 1/2 in. barrel, blue finish, eagle stocks.
 P-1656 - .357 Magnum, 5 1/2 in. barrel, nickel finish, wood stocks.
 P-1670 - .357 Magnum, 7 1/2 in. barrel, blue finish, eagle stocks.
 P-1673 - .357 Magnum, 7 1/2 in. barrel, blue finish, wood stocks.
 P-1676 - .357 Magnum, 7 1/2 in. barrel, nickel finish, wood stocks.

P-1740 - .44 Special, 4 3/4 in. barrel, blue finish, eagle stocks.
 P-1746 - .44 Special, 4 3/4 in. barrel, nickel finish, wood stocks.
 P-1750 - .44 Special, 5 1/2 in. barrel, blue finish, eagle stocks.
 P-1756 - .44 Special, 5 1/2 in. barrel, nickel finish, wood stocks.
 P-1770 - .44 Special, 7 1/2 in. barrel, blue finish, eagle stocks.
 P-1776 - .44 Special, 7 1/2 in. barrel, nickel finish, wood stocks.
 P-1716 - .44 Special, 12 in. barrel, nickel finish, wood stocks.
 P-1840 - .45 Colt, 4 3/4 in. barrel, blue finish, eagle stocks.
 P-1841 - .45 Colt, 4 3/4 in. barrel, nickel finish, wood stocks.
 P-1850 - .45 Colt, 5 1/2 in. barrel, blue finish, eagle stocks.
 P-1856 - .45 Colt, 5 1/2 in. barrel, nickel finish, wood stocks.
 P-1870 - .45 Colt, 7 1/2 in. barrel, blue finish, eagle stocks.
 P-1876 - .45 Colt, 7 1/2 in. barrel, nickel finish, wood stocks.
 P-1813 - .45 Colt, 12 in. barrel, blue finish, eagle stocks.
 P-1816 - .45 Colt, 12 in. barrel, nickel finish, wood stocks.
 P-1940 - .44-40 caliber, 4 3/4 in. barrel, blue finish, eagle stocks.
 P-1941* - .44-40 caliber, 4 3/4 in. barrel, nickel finish, wood stocks.
 P-1950 - .44-40 caliber, 5 1/2 in. barrel, blue finish, eagle stocks.
 P-1970 - .44-40 caliber, 7 1/2 in. barrel, blue finish, eagle stocks.
 P-1976* - .44-40 caliber, 7 1/2 in. barrel, nickel finish, wood stocks.
 P-1911 - .44-40 caliber, 12 in. barrel, nickel finish, wood stocks.

*These model numbers were used primarily for engraved or special ordered revolvers as the two models indicated were never produced as a regular model. "Blue finish" in the above chart denotes the standard blue finish, i.e., blue with case hardened frame.

NEW FRONTIER MODEL

P-4671 - .357 Magnum, 7 1/2 in. barrel, nickel finish, wood stocks.
 P-4750 - .44 Special, 5 1/2 in. barrel, Royal Blue finish, wood stocks.
 P-4770 - .44 Special, 7 1/2 in. barrel, Royal Blue finish, wood stocks.
 P-4840 - .45 Colt, 4 3/4 in. barrel, Royal Blue finish, wood stocks.
 P-4850 - .45 Colt, 5 1/2 in. barrel, Royal Blue finish, wood stocks.
 P-4870 - .45 Colt, 7 1/2 in. barrel, Royal Blue finish, wood stocks.
 P-4940 - .44-40 caliber, 4 3/4 in. barrel, Royal Blue finish, wood stocks.
 P-4970 - .44-40 caliber, 7 1/2 in. barrel, Royal Blue finish, wood stocks.

Note: The term "Royal Blue" in the New Frontier chart denotes a revolver with a casehardened frame and a Royal (high polish) Blue finish on the other major components.

SHERIFF'S MODELS

- P-1932 - .44-40 caliber, 3 in. barrel, blue finish, eagle stocks.
P-1933* - .44-40/.44 Special, 3 in. barrel, nickel finish, wood stocks.
P-1934* - .44-40/.44 Special, 3 in. barrel, Royal Blue finish, wood stocks.
*Circa 1984 all Sheriff's Models are listed as single calibers: .44-40 or .45 caliber.

REVOLVERS WITH FULL BLUE FRAMES

Some of the "full blue" models have had more than one model number assigned to the same variation. As a result, a particular model may have been identified by different model numbers at different times. Following the model numbers and descriptions in this chart will be an approximate time frame during which that particular model was in use. No date following the description indicates that only one model number for that particular variation is known to the author (Don Wilkerson).

- P-1640 - FB - .357 Magnum, 4 3/4 in. barrel, fluted cylinder, eagle stocks.
P-1650 - FB - .357 Magnum, 5 1/2 in. barrel, fluted cylinder, eagle stocks.
P-1740 - FB - .44 Special, 4 3/4 in. barrel, fluted cylinder, eagle stocks.
P-1750 - FB - .44 Special, 5 1/2 in. barrel, fluted cylinder, eagle stocks.
P-1770 - FB - .44 Special, 7 1/2 in. barrel, fluted cylinder, eagle stocks.
P-1770 - UB - .44 Special, 7 1/2 in. barrel, unfluted cylinder, eagle stocks.
P-3840 - .45 Colt, 4 3/4 in. barrel, both fluted and unfluted cylinders, eagle stocks (early to mid -1982).
P-1840 - FB - .45 Colt, 4 3/4 in. barrel, fluted cylinder, eagle stocks (mid to late 1982 to date).
P-1840 - UB - .45 Colt, 4 3/4 in. barrel, unfluted cylinder, eagle stocks (mid to late 1982 to date).
P-1850 - FB - .45 Colt, 5 1/2 in. barrel, fluted cylinder, eagle stocks.
P-1850 - UB - .45 Colt, 5 1/2 in. barrel, unfluted cylinder, eagle stocks.
P-1871 - .45 Colt, 7 1/2 in. barrel, fluted cylinder, wood stocks (1977 to 1979).
P-1870 - FB - .45 Colt, 7 1/2 in. barrel, fluted cylinder, wood stocks (1982 to date).
P-1870 - UB - .45 Colt, 7 1/2 in. barrel, unfluted cylinder, wood stocks (1982 to date).
P-1871 - FB - .45 Colt, 12 in. barrel, fluted cylinder, eagle stocks.

FULL BLUE NEW FRONTIERS

- P-4770 - FB - .44 Special, 7 1/2 in. barrel, fluted cylinder, wood stocks.
P-4870 - FB - .45 Colt, 7 1/2 in. barrel, fluted cylinder, wood stocks.
P-4870 - UB - .45 Colt, 7 1/2 in. barrel, unfluted cylinder, wood stocks.

MISCELLANEOUS MODEL NUMBERS

- 1750 - AA - .44 Special, 5 1/2 in. barrel, blue finish with nickel cylinder, eagle stocks.
1750 - AB - .44 Special, 5 1/2 in. barrel, blue finish with nickel cylinder with blue flutes, eagle stocks.
1840 - UC - .45 Colt, 4 3/4 in. barrel, blue finish,

- unfluted cylinder, eagle stocks.
1850 - UC - .45 Colt, 5 1/2 in. barrel, blue finish, unfluted cylinder, eagle stocks.
1870 - UC - .45 Colt, 7 1/2 in. barrel, blue finish, unfluted cylinder, eagle stocks.
Note: The term "blue finish" in this chart is the standard blue finish with a casehardened frame.

BLACK POWDER MODEL P REVOLVERS

- P-2830 - .45 Colt, 3 in. barrel, blue finish.
P-2833 - .45 Colt, 3 in. barrel, nickel finish.
P-2834* - .45 Colt, 3 in. barrel, Royal Blue finish.
P-2836 - .45 Colt, 4 in. barrel, Royal Blue finish.
P-2837 - .45 Colt, 4 in. barrel, nickel finish.
P-2840 - .45 Colt, 4 3/4 in. barrel, blue finish.
P-2841 - .45 Colt, 4 3/4 in. barrel, nickel finish.
P-2847* - .45 Colt, 5 in. barrel, nickel finish.
P-2870 - .45 Colt, 7 1/2 in. barrel, blue finish.
P-2871 - .45 Colt, 7 1/2 in. barrel, nickel finish.
P-2940 - .44-40 caliber, 4 3/4 in. barrel, blue finish.
P-2941 - .44-40 caliber, 4 3/4 in. barrel, nickel finish.
P-2970 - .44-40 caliber, 7 1/2 in. barrel, blue finish.
P-2971 - .44-40 caliber, 7 1/2 in. barrel, nickel finish.
P-2437* - .32-20 caliber, 4 in. barrel, nickel finish.
P-2474* - .32-20 caliber, 7 1/2 in. barrel, Royal Blue finish.

**As of this writing these calibers have not been produced. The terms "blue finish" and "Royal" in this chart refer to Colt's standard single-action finish, i.e., casehardened frame with all components finished in either standard blue or Royal Blue.*

GERMAN EARLY DATE CODES

Determining the date of manufacture for early German arms is not as simple as looking up a serial number. If the manufacturer is still in existence, contacting the manufacturer with model and serial number information may result in determining a date of manufacture. There are, however, some numeric stampings on German arms that, when present, indicate a month and year of manufacture. They will appear as three or four digit date codes that may appear with or without punctuation.

Examples	Date
Code	
535	May 1935
5.35	May 1935
5/35	May 1935
1163	November 1963
11.63	November 1963
11/63	November 1963

GERMAN MODERN DATE CODES

Determining the year of manufacture for modern German arms is much simpler. The two letter code is found as part of or near the proof marks and can be interpreted using the following chart.

A	B	C	D	E	F	G	H	I	K
0	1	2	3	4	5	6	7	8	9

Examples	Date
Code	
KK	99 or 1999
IF	85 or 1985

**HIGH STANDARD
SERIALIZATION**

The author wishes to express thanks to Mr. John J.

Stimson, Jr. for the following information.

The serial numbers listed represent the highest serial number shipped for the year. Regular serial numbers began with 5,000 which was shipped October 15, 1932. Although it appears the guns were generally assembled in numerical sequence, the shipments were not and some guns may have remained in inventory for weeks, months, or even years between assembly and shipment.

<u>YEAR</u>	<u>SERIAL NUMBER</u>
1932	5,102
1933	6,567
1934	8,313
1935	11,651
1936	18,751
1937	30,026
1938	39,430
1939	50,619
1940	70,715
1941	91,986
1942	104,520
1943	115,423
1944	135,659
1945	145,817
1946	174,194
1947	233,402
1948	301,349
1949	326,123
1950	335,693
1951	356,899
1952	357,295
1953	442,984
1954	475,186
1955	508,613
1956	652,405
1957	776,129
1958	913,111
1959	1,044,802
1960	1,147,641
1961	1,224,652
1962	1,285,049
1963	1,353,764
1964	1,418,870
1965	1,507,541
1966	1,610,707
1967	1,853,513
1968	2,030,404
1969	2,172,356

MARLIN FIREARMS COMPANY SERIALIZATION

Approximate serialization for Marlin rifles from 1883 to 1906 including Models 1881, 1888, 1889, 1891, 1892, 1893, 1894, and 1897. Marlin did not assign

a specific block of Ser. No. to these models. Using this list will place the year of manufacture plus or minus one year.

For a factory authentication letter on an older Marlin firearm, contact the Buffalo Bill Historical center, Cody Firearms Museum, 720 Sheridan Ave., Cody, WY 82414. Web site www.bbhc.org or phone 307-578-4031. There is a \$60 fee per serial number search.

**MAUSER BROOMHANDLES
SERIALIZATION
1896 - late 1930**

SER. #	DATE	NATURE OF CHANGES
before	1896	- The cone hammer used in place of spur hammer.

MAUSER BROOMHANDLES

SERIALIZATION 1896 - late 1930, cont.

SER. #	DATE	NATURE OF CHANGES
#25	1896	- "SYSTEM MAUSER" marked on top of the chamber.
before	1897	- The locking system changed from one to two lugs.
#200-	The barrel contour at the chamber is tapered instead of stepped.	
#390	1897	- "WAFFENFABRIK MAUSER OBERNDORF A/N" marked on top of the chamber.
#975	1897	- The center section of the rear panel on the left side of the frame is not milled out (this feature appears earlier on a few 20-shot pistols). This area is sometimes used for special markings on contract pieces such as the Turkish and Persian.
#12,200 to #14,999	1898	- The large ring hammer replaces the cone hammer.
#21,000	1899	- There is no panel milling on either side of the frame. - A single lug bayonet type mount adopted for retaining the firing pin instead of the dovetail plate. - The trigger is mounted directly to the frame by two integral lugs rather than attached to a removable block. - The position of the serial number moved from the rear of the frame above the stock slot to the left side of the chamber.
#22,000	1900	- Two integral lugs used to mount the rear sight instead of a pin.
#29,000	1902	- Very shallow panels milled into the frame on both sides.*
#31,200	1903	- "WAFFENFABRIK MAUSER OBERNDORF A NECKAR" added to the right rear frame panel.*
#34,000	1904	- The depth of the frame panel milling increased.*
#35,000	1904	- The barrel extension side rails lengthened about a half inch.* - An additional lug for mounting added to the firing pin.* - The hammer changed to the small ring pattern.* - The safety mechanism altered to require that the lever be pushed up to engage it instead of down.* - The center of the safety lever knob is no longer milled out.*
#38,000	1905	- The short extractor with two ribs replaces the long thin extractor.*
#100,000	1910	- The rifling changed from four groove to six groove.
to #130,000	1911	- "NS" (Neues Sicherung or New Safety) appears on the back of the hammer. The hammer must be moved back beyond the cocked position to engage the safety.
#270,000	1915	- The lanyard ring stud is rotated 90 degrees.
#440,000	1921	- The Mauser "banner" appears on the left rear frame panel.
#501,000	1923	

MAUSER BROOMHANDLES**SERIALIZATION 1896 - late 1930, cont.**

SER. #	DATE	NATURE OF CHANGES
#800,000	1930	- The Mauser banner is enlarged. - A step is added to the barrel contour just ahead of the chamber. - The safety is changed to allow the hammer to be dropped from a cocked position, without danger, by pulling the trigger (called Universal Safety). - The front of the grip frame widened to equal the rear part where the stock slot is.
#850,000	1932	- "D.R.P.u.A.P." (Deutsches Reich Patente und Anderes Patente) added below the inscription on the right rear frame panel.
#860,000	1932	- The lettering in the frame inscription is slanted forward.
#900,000	1934	- The serial number is moved to the rear of the barrel extension behind the sight. - The two grooves in each side of the barrel extension side rails are eliminated.

*These nine changes appear out of sequence on three small batches of guns (29,000 to 29,900, 40,000 to 41,000, and 42,600 to 43,900). Most of these pistols are of the "bolo" style, that is they have 3.9 inch barrels, small grips, six or 10-shot magazines and fixed or adjustable rear sights. A few of these pistols show non-standard barrel contours, barrel extension milling and hammer safety devices. Apparently the factory withheld these numbers from the regular production series and reissued them at later dates.

PARKER BROTHERS SHOTGUNS SERIALIZATION 1866 - 1942

Additional information regarding Parker shotguns is available in PARKER GUN IDENTIFICATION & SERIALIZATION compiled and edited by Charles E. Price & S.P. Fjestad available on www.bluebookinc.com.

**REMINGTON DATE CODE
DATA & SxS SHOTGUN
SERIALIZATION**

Firearms Identification (Code located on barrel, left side of frame) Month of Manufacture (Code letter corresponds to numeral underneath).

The following barrel code information is reliable when used to identify the month and year of manufacture of Remington rifles since Remington seldom replaced barrels. When used to date Remington shotguns, where the barrel is easily changed, make sure the barrel is original to the shotgun.

For example "KP" would be 5 (May) 1923, and "RYY" would be 11 (November) 1952.

**L.C. SMITH
SERIALIZATION**

Existing L.C. Smith shotgun records include:

Hunter Arms Company factory records circa 1890-1919, Hunter Arms Company shipping records circa 1918-1946, L.C. Smith Gun Company, 1946-1950 (FWS prefix), Marlin Firearms Company, 1969-71 (FWS prefix).

For a factory authentication letter on an older Marlin firearm, contact the Buffalo Bill Historical center, Cody Firearms Museum, 720 Sheridan Ave. Cody, WY 82414. Web site www.bbhc.org or phone 307-578-4031. There is a \$75 fee per serial number search.

L.C. Smith (Manufactured by Hunter Arms Co. 1890-1918).

Beginning in January 1995 the Spanish proof house implemented a new serial number system. Requirements included: 1) all guns would be numbered in a new sequential series starting with the number 1 at the beginning of the year, 2) the serial number was to be followed by the last two digits of the production year, 3) each manufacturer was assigned a code to be stamped on every gun, and 4) weapons were to be marked as to type.

The new system consists of four sets of digits separated by a hyphen. The first set is the manufacturer's code, the second set designates the type of weapon, and the third set is the firearms chronological number irrespective of model, the fourth set shows the year of mfg.

The new weapons coding system includes, Carabines 01, Shotguns 03, Pistols 04, Revolvers 05, Rifles 06, Muzzleloaders 13, Short carbines 14, Submachine guns 15; etc.

STURM, RUGER & CO., INC.

Additional information regarding Sturm, Ruger & Co., Inc. firearms (including serialization) can be found in *Ruger & His Guns*; A History of the Man, the Company and Their Firearms by R.L. Wilson.

**WINCHESTER RIFLES
SERIALIZATION**

The following Winchester serial numbers appear courtesy of U.S. Repeating Arms, New Haven, CT. I would like to thank U.S. Repeating Arms and Mr. Pardee for making these production figures available.

Records at the factory indicate the following serial numbers were assigned to guns at the end of the calendar year.

For additional information including factory letters contact the Cody Firearms Museum. Factory letters for Lever Action rifles are \$60 and for Model 21 SxS shotguns are \$75.

Buffalo Bill Historical Center
Attn: Cody Firearms Museum
720 Sheridan Ave.
Cody, WY 82414

In the spring of 2005, the Cody Firearms Museum began a research project involving the Winchester Repeating Arms Company production through the comparison of shipping records (used by the Cody Firearms Museum for Winchester factory letters) and the recently received polishing room records. The little known Winchester polishing room Serial Number Application Records (SNAs) (used in many works of George Madis) documents many Winchester firearms receiver serialization circa 1873 to 1964. The following overview appears courtesy of David Kennedy former Robert W. Woodruff Curator of the Cody Firearms Museum at the Buffalo Bill Historical Center in Cody, Wyoming. The SNAs data assembled from this research is labeled Polishing Room SNAs and included with the U.S. Repeating Arms serialization below.

"Mr. A. E. Hertel, who has had charge of numbering guns practically since the Company started, has 30-odd books in which he has kept track of the gun numbers. These are most valuable records and it seems desirable to place these in a vault. I would therefore suggest that Miss Hall be asked to see Mr. Hertel and make proper arrangements for filing them in the Contract Files, and in a manner so that they can be readily referred to by Mr. Hertel in case questions arise."

This memo from Edwin Pugsley to R.C. Swanton, dated January 22, 1934, preserved a very important part of firearms history. Moved into a vault in location 1-A-3 (Building 1, Tract A, Floor 3) within the Winchester Factory, the books mentioned and the data they contain hold a little-seen insight into the production history of the Winchester Repeating Arms Company. This insight will allow researchers, in time, to create a more accurate understanding of the rate of production, the time spent by parts in the warehouse, and even an approximate understanding of the number of parts retained as a surplus at a given time.

The Serial Number Application Records (SNAs), each a small notebook with most measuring 3.5 in.x6 in., have the model name written on or, more often, punched out of the brown cover. Most pages contain two columns. The left column lists the date and the right column lists the last serial number processed within a group of guns.

I had the privilege of researching these SNAs and their contents while employed as the Robert W. Woodruff Curator of the Cody Firearms Museum at the Buffalo Bill Historical Center (BBHC) in Cody, Wyoming. The SNAs booklets from Winchester's Polishing Room are currently held by the McCracken Research Library at the BBHC as part of MS 20-Winchester Repeating Arms Co. Office Files Collection.

These SNAs maintained by the Polishing Room of the Winchester Repeating Arms Company, contain dates and related serial numbers. Arranged in a series of small booklets, the information contained within gives a new view into the history of the Winchester Repeating Arms Company. Being the only step in which we know the parts were processed in a consecutively numbered manner, this appears to be the closest we can achieve to determining the date of manufacture for these firearms given current primary sources.

The models represented by these records run the gamut

from the Model 1866 (starting at serial number 135668) to the end of production of the Model 12 shotgun (serial number 1970885). While the shipping records held by the Cody Firearms Museum end generally in the period 1907-1920, SNAs include production of the World War I-era Model 1917 and the World War II-era M1 Carbine – known internally as the Model 31. Many other models appear in the records in addition to those listed above.

Although some researchers and historians may not be familiar with these SNAs, the data contained in them have appeared in several reports and books on the subject of firearms, and with little in the way of an uproar. House's *The Winchester Model 52* and both *The Winchester Model 42 Shotgun* and *Winchester Slide-Action Rifles, Volume I*, by Ned Schwing include production information from the Hertel's records. Dave Riffle's *The Greatest Hammerless Shotgun Ever Built: The Model 12 – 1912-1964*, while not referencing the serial number applications, references similar information that can be corroborated by these data.

The great question to ask at this point is, "Why Bother? We have had production numbers from Winchester available for most of a century!" This is correct, in a way. Winchester published their sales numbers several times, internally and externally. Unfortunately, sales figures and productions did not always match and were, in some instances, creating more questions than they answered. As these numbers were used again and again in many books (*The History of Winchester Firearms* – numerous editions, *The Winchester Book* – and others by George Madis, and, yes, the *Blue Book of Gun Values*), confusing situations arose when specific small samples were examined or when Winchester production data on individual guns failed to agree with the previously published information. The SNAs can help smooth out some of these bumps. While some of these clarifications may be familiar to the expert, much of this is news to the collector.

Model 1885 Late Production – Information regarding production of the Model 1885 has been troublesome simply as a result of discrepancies between other sources and those in the SNAs. The positive side of this error is that the entire production of this gun after 1901 is older than has been previously understood – sometimes by seven or eight years.

Model 1890 Early Production – This information has not been accurate or available the years prior to 1908 or after 1932. We now have access to reliable data for the entire range of production from 1890 to 1947 – serial numbers 1 to 854747.

Models 1893 & 1897 Transition – The confusion with this pair of early Winchester slide action shotguns comes from where serialization ended for the Model 1893 and began for the Model 1897 and, more importantly, when. The previous understanding of this production taught that the Model 1897 was serially numbered separate from the Model 1893 and that production of the Model 1897 was more than 30,000 in its first year of production. In fact, the Model 1897 simply continued the serialization of the 1893. Annual production of this Model did not surpass 30,000 until 1900 – the first Winchester to reach this mark since the Model 1873.

Models 1892 & 1894 Antique Status – An area of concern for collectors of early Model 1892s and 1894s was the three to five year difference between the earlier-known production dates and the dates provided in Factory Letters from the Cody Firearms Museum. A commonly given reason was, "Oh, that's OK. This must have sat in a parts bin in the warehouse all this time." There is always this possibility. However, individual guns

show up in the shipping books only two days to two weeks after serialization. There are some that take longer and there are no known instances of warehouse "Date In" records that precede SNAs dates.

As for the parts bin theory, Winchester would have required storage for the parts of more than 100,000 guns (sometimes 145,000 or more) on any given day during 1896 to 1903 – a period in which Winchester made 370,000-400,000 guns of these two models, depending on the source. This number of excess parts is the difference between the previously understood production numbers and the numbers provided in the SNAs (and supported by the shipping records).

Regarding the BATFE and any interest in 150,000 no-longer-antique guns, there is no change in their level of interest – which is practically none. The only interest that law enforcement has held and will likely continue to hold is in guns illegally modified to short-barrel rifle configuration (barrels less than 16 inches). As for the dating of these firearms, Cody seldom receives calls from the BATFE's Firearms Technology Branch. Your run-of-the-mill antique gun collector doesn't come up on their radar as much as your run-of-the-mill biker gang.

Model 1894 "Spruce Guns" – 1,800 Model 1894 carbines were delivered to the U.S. Army in January 1918, in order to protect spruce production in the Pacific Northwest. These guns are typically in the serial number range 835,xxx to 853,xxx. By the previous reckoning, production occurred in 1918 and 1919, largely after their understood delivery. The SNAs show the production to have taken place during 1916, 1917, and 1918, clarifying the situation.

Model 1897 & 1912 Trench Guns – Collectors of WWI and II Winchester trench guns have scratched their collective heads when comparing guns verified by the connoisseur to the previously understood production dates. This confusion was increased when delivery dates on military records preceded the understood production date by several years – often after the war in question. The SNAs give clear evidence that most of these guns were produced during wartime – and in many cases before!

Model 1894 PCMR Carbines – Similar to the "Spruce Guns" of World War I, 3,000 Model 1894 carbines were used in the Pacific coast forests during World War II. The Canadian Military purchased them in order to equip the Pacific Coast Militia Rangers, a volunteer unit tasked with patrolling the coast in preparation for a Japanese invasion. These guns, ordered in 1942, are all believed to have been manufactured in the 1,300,XXX serial range (based on known guns). As with the "Spruce Guns," this is problematic, placing the guns in a nether region of apparently unrecorded Winchester production during the War. However, the SNAs place production in 1941, preceding the order date.

Many other models that cannot be listed here...

The question on the lips of many is, "How can I get access to this information?" Prior to the writing of this article, the answer would involve a trip to Cody, Wyoming, to visit America's premier gun museum (my apologies – I am biased in this respect).

Fortunately for the gun collecting public, the Cody Firearms Museum recently announced that these records would be made available (and for a small fee) through the Cody Firearms Museum Records Office starting in spring 2011. A list of models and fee structure is available from the Records Office.

2344 SERIALIZATION, cont.

Contact information can be found in the back of the *Blue Book of Gun Values* and on the Buffalo Bill Historical Center webpage (www.bbbhc.org).

A short biography of Mr. Hertel is in *The Winchester Model 52: Perfection in Design*, Herbert Houze (Iola, WI: Krause Publications), Pg. 166. In 1918, he was listed in the Winchester Record as being one of Winchester's "25-year men" with a hire date of May 10, 1884. By the time he left the company, Hertel had worked at Winchester for over a half-Century ("The Winchester Record", Vol. 1, No. 2, August 30, 1918, Pg. 7).

MS 20, Winchester Repeating Arms Company Office Files, Serial Number Application Books, folder 1.

No further serial numbers were recorded until the discontinuance of the Model 1886 which was in 1935 at serial no. 159994.

MODEL 1890

Records on the Model 1890 are somewhat incomplete. Factory records indicate the following serial numbers were assigned to guns at the end of the calendar year beginning with 1908. Actual records on the firearms which were manufactured between 1890 and 1907 will be available from the "Cody Firearms Museum," located at the "Buffalo Bill Historical Center."

Model 1894 facts.

* The post-64 Model 94 began with serial number 2,700,000.

*Serial number 1,000,000 was presented to President Calvin Coolidge in 1927.

*Serial number 1,500,000 was presented to President Harry S. Truman in 1948.

*Serial number 2,500,000 and 3,000,000 were presented to the Winchester Gun Museum, now located in Cody, Wyoming.

*Serial number 3,500,000 was not constructed until 1979 and was sold at auction in Las Vegas, Nevada.

*Serial number 4,000,000 - whereabouts unknown at this time.

*Serial number 4,500,000 - shipped to Italy by Olin in 1978. Whereabouts unknown.

*Serial number 5,000,000 - in New Haven, not constructed as of March 1983.

** Actual records on serial numbers stops in 1948. The serial numbers ending each year from 1948 to 1957 were derived at by taking the last serial number recorded (58486) and the last number from 1948, (49684) and dividing the years of production (9), which relates to 978 guns each year for the nine year period.

75 -	E 124828
76 -	E 125019
77 -	E 125211
78 -	E 125315

This Model was discontinued in 1978. A small clean up of production was completed in 1979 with a total of 125419.

MODEL 53

The Model 53 was serial numbered in both its own series (1 to slightly over 15,000) as well as within the Model 1892 series. Early guns predominate the Model 53 serial number series with Model 1892 series serial numbers appearing more frequently mid to late production.

This Model was discontinued in 1932, however, a clean up of production continued for 9 more years.

59 -	262793
60 -	282594
61 -	302395
62 -	322196
63 -	342001

This Model was discontinued in 1963. For some unknown reason there are no actual records available from 1949 through 1963. The serial number figures

for these years are arrived at by taking the total production figure of 342001, subtracting the last known # of 115281, and dividing the difference equally by the amount of remaining years available (15).

1300	LX
1400	N
1500	NX
1500 (European)	NE
9422	F

WINCHESTER SHOTGUNS

Records at the factory indicate the following serial numbers were assigned to guns at the end of the calendar year.

MODEL 1887

YEAR	APPROX. LAST NO.
1887 -	1 to 7431
88 -	22408
89 -	25673
90 -	29105
91 -	38541
92 -	49763

MODEL 1887, cont.

YEAR	APPROX. LAST NO.
93 -	54367
94 -	56849
95 -	58289
96 -	60175
97 -	63952
98 -	64855

According to these records no guns were produced during the last few years of this model and it was therefore discontinued in 1901.

MODEL 1893 Start

YEAR	APPROX. LAST NO.	POLISHING ROOM SNAS
1893 -	N/A	7958
94 -	N/A	16985
95 -	N/A	24109
96 -	N/A	32908

MODEL 1897 Start

YEAR	APPROX. LAST NO.	POLISHING ROOM SNAS
1897 -	1 to 32335	46190
